HM-D Lab Series

Technology

Stark Transmission System®

The HM-D model, which is part of the Hoytom LAB series, is made with nominal capacities between 5 y 1000 kN. Its high capacity load cell provides maximum precision across the entire measurement range. It can also be equipped with an extensive range of fixtures, such as tensile grips, T-slotted plates, compression plates, bending fixtures, extensometers, etc.

Each machine includes HoyWin® test control software, and our custom designed electronics. This enables users to get maximum performance and precision, through a simple and intuitive interface.

Typical test applications include high strength steel (HSS), aerospace and automotive structures, screws, nuts, etc.

Characteristics:

- Extremely rigid frame for minimum deformation during testing.
- Preload precision ball screws.
- HBM® load cell (international leader in this technology).
- STARK® Transmission System.
- Integrated touch screen.
- Desktop computer with HoyWin® software.
- Modern appearance.

Optional accessories:

- Manual, pneumatic or hydraulic grips.
- Large range of tools for each test.
- T-slotted plate for adapting to components with different geometries.
- Extensometers.
- Perimeter guards.
- Table to raise work area.
- Double test area.
